

AVAROS D2.2 Security Checklist and Evidence

Date: 2026-07-01 Scope: AVAROS/WASABI beta package and WASABI demo deployment path
Release: AVAROS DIA OVOS Manufacturing Assistant v0.1.1

Scope and Status

The AVAROS/WASABI beta security checklist is closed with evidence for the scoped v0.1.1 beta package and demo deployment path. The assessment scope is limited to the AVAROS release package, public AVAROS access point, WASABI Shop publication, and AVAROS-related supporting services verified for this delivery. It is not a host-wide production-security certification for unrelated services.

Checklist

Control	Evidence	Status
Release ZIP excludes secrets and runtime files	Archive scan found 384 entries and 0 forbidden .env, key, log, database, TLS private key, or Git metadata entries	Closed
Release ZIP has checksum	SHA-256: 7d3d71293c8cefe586667e021e3fceeee3b9df183a683679 597a6e3ed5dfb3ff	Closed
Generated environment uses private permissions	scripts/prepare-env.sh creates .env with mode 0600	Closed
Live AVAROS Web UI uses HTTPS	https://avaros.reneryo.com/health returned HTTP 200	Closed
WASABI Shop product is live over HTTPS	Product URL returned HTTP 200	Closed
PREVENTION health path verified	Local PREVENTION GraphQL health query returned HTTP 200	Closed
HiveMind and wake-word are not directly host-published	Configured deployment exposes them only on Docker networks	Closed
AVAROS direct Web UI/demo host ports are loopback-only	Web UI 127.0.0.1:8080; demo platform 127.0.0.1:8090	Closed
PREVENTION direct host port is loopback-only	PREVENTION 127.0.0.1:8082	Closed
WASABI Shop origin port is restricted	Host firewall service restricts origin access to the approved proxy path	Closed
Default WASABI database password is blocked	Old root/root database login was tested and blocked	Closed
Current secrets absent from fresh logs	Fresh logs checked for AVAROS/HiveMind/WASABI current reusable secret values	Closed
HiveMind credential logging is redacted	HiveMind endpoint patched to avoid printing reusable credentials	Closed
Browser audio playback uses page media	Server-backed TTS endpoint returns audio/wav; browser speech remains fallback	Closed

Control	Evidence	Status
Clean install/uninstall verified	ZIP install, health checks, TTS WAV, demo platform, and uninstall passed in clean project	Closed

Evidence Summary

- AVAROS live health: HTTP 200 at <https://avaros.reneryo.com/health>.
- WASABI Shop product: HTTP 200 at the public product URL.
- PREVENTION local GraphQL health query: HTTP 200.
- Clean install test used alternate ports 19180 and 19190 and verified same-origin HiveMind URL resolution.
- Clean install server TTS returned audio/wav with a WAV RIFF header.
- Clean install server TTS preflight returned HTTP 204.
- Clean uninstall removed the clean-install containers, volumes, network, and local images.

Exclusions

The checklist does not certify unrelated host services such as separate RENERYO database ports or non-AVAROS services. Those require their own deployment-owner review if they are included in a broader production audit.

Submitted Artifacts

The D2.2 evidence set consists of:

- AVAROS_D2.2_Beta_Package_Checklist.pdf
- AVAROS_D2.2_Security_Checklist_and_Evidence.pdf
- avaros-dia-v0.1.1.zip
- avaros-dia-v0.1.1.zip.sha256
- AVAROS-Quick-Start-v0.1.1.pdf

The evidence set excludes raw .env files, credential-transfer files, runtime logs, database backups, private keys, and screenshots containing credentials.
